State Engineer.

The works proposed to be used for the diversion of the water appropriated are as follows:

A removable dam or dam with removable and adjustable gates is to be constructed at the point of diversion for the purpose of diverting the water through pipes or ditches into ditches on applicant's land and thence upon the lands for irrigation and stock watering.

The pipes or ditches entering the main supply canal are to be equipped with gate devices so as to permit the closing of the same. It is proposed to so adjust the gates or spillway in the dam in the main canal so that damage to other lands by seepage will not occur. The gates being either opened or closed, as the flow of water in the main canal may require.
